

Node & NPM Installation

Please follow the following steps for Ubuntu users.

Step 1: Open Terminal

Step 2: Update your package list to ensure you have the latest available versions:

```
sudo apt update
```

Step 3: Install Node.js using the package manager:

```
sudo apt install nodejs npm
```

Step 4: Verify the installation by checking the Node.js and npm versions:

```
node -v
```

```
npm -v
```

Please follow the following steps for Mac users.

1. Go to the official Node.js website (<https://nodejs.org/>).
2. On the homepage, you will find the "LTS" (Long-Term Support) version and the "Current" (Latest) version. The LTS version is recommended for most users, as it is more stable.
3. Click on the "LTS" or "Current" download button, depending on your preference.
4. The installer package (.pkg) will be downloaded to your computer. Double-click the package to start the installation.
5. Follow the on-screen instructions to complete the installation.
6. Once the installation is complete, you can verify the Node.js and npm versions by opening the "Terminal" application and running:

```
7. node -v
```

```
8. npm -v
```
